

DISTRIBUTED AUDIO FOR EXERCISE FACILITY

SourceFlex System Provides Individual Headphone Stations

Description:

Each piece of exercise equipment is outfitted with an RDL SAS-HC8 Headphone Control Station so that users can select from eight audio programs and adjust volume to their own preference. Six audio sources in this system are associated with video monitors at the front of the room. A TX-J2 Unbalanced Input Transformer is used to combine each stereo signal to mono. Two other channels are from radio or satellite receivers. The SAS-8i Audio Input Chassis also provides an “all call” paging input.

The SAS-8i supports four SourceFlex listening stations and multiple SourceFlex expansion chassis'. Listening station expansion may be added in groups of two with the SAS-82 2 Station Audio Controller or in groups of eight with the SAS-8C 8 Station Audio Controller. There is no practical limit to the number of listening stations in any system. Connections between the controller and each listening station use a multi-conductor twisted-pair cable. The SourceFlex system is reliable and cost effective without the problems of wireless systems with rechargeable batteries.

Parts List

Product	QTY
SAS-8i	1
SAS-HC8	4
TX-J2	6
