

ELIMINATE AUDIO AND VIDEO HUM IN MEETING ROOM

Galvanic Isolation for Audio and Composite Video "Ground Loops"

EZ-HK3
Audio/Video Hum Killer
Use on the equipment cart or mount permanently to rear of monitor.

The EZ-HK3 removes the ground hum caused because the player and monitor are connected to power outlets on different circuits.

Description:

Picture and sound quality from the player on the equipment cart is easily degraded by a "ground loop".

The difference in ground voltage between the audio/video source and monitoring locations can create herringbone patterns or rolling hum bars in the video, and hum in the audio. Small "ground loop" voltages can easily impair the quality of audio and/or video signals.

The RDL EZ-HK3 removes the "ground loop" using a stereo pair of high quality audio and video transformers in a shielded metal enclosure. The input jacks are ground-isolated. A ground-lift switch allows the output jack shields to be lifted from the metal chassis if required.
