

HOTEL ROOM COMPLETE ENHANCED AUDIO SYSTEM

Private Bedside TV Audio and Adjustable Bathroom TV Audio Without Disturbing Partner

Description:

This installation enhances the hotel experience when one guest wishes to watch and listen to the TV while the guest's partner does not. Either guest can plug in personal headphones to the bedside TP-HA1A Headphone Amplifier, adjust the listening level and enjoy the video program or movie. With the TV set to mute its internal speakers, each guest enjoys their environment (video/audio program or silence).

In addition, this installation completes the hotel experience by allowing the TV audio to be heard clearly while getting ready for the day. The -TPA1A amplifier in the wall allows the guest to adjust the audio as loud as necessary, even with shower water running. Intelligibility of the TV audio is not dependent on the volume setting in the guest room. If the TV is set to mute its internal speakers, TV audio is *only* heard in the bathroom. This is ideal if one guest wished to sleep while the other guest is spending time in the bathroom.
