

# STEREO REMOTE AUDIO LEVEL CONTROL

Studio Quality Volume Adjustment for Professional and Consumer Applications

### Description:

The RU-VCA2A Two Channel Digitally Controlled Attenuator and RLC10K Remote Level Control are used to increase and decrease the level of the Stereo Sound source feeding the amplifiers.

The RU-VCA2A offers clickless level adjustment, accurate tracking and outstanding wide-band, low-noise studio quality performance. It can be controlled remotely by a variety of RDL or third-party controls and/or locally via front-panel pushbuttons. Each audio input and output may be configured balanced or unbalanced. Multiple RU-VCA2As and/or RU-VCA6As may be linked together for single-point level control of 7.1, 10.2 or 22.2 surround sound systems.
