

HOTEL ROOM ENHANCED AUDIO SYSTEM

Private Bedside TV Audio Without Disturbing Partner and Adjustable Bathroom TV Audio

Description:

The hotel guest experience is enhanced in this application by allowing each guest to choose when and where to listen to the TV sound. In the bedroom, one guest may wish to watch and listen to the TV while the guest's partner does not. With the TV speakers muted, either guest can watch and listen to the TV by plugging personal headphones into a bedside -HA1A Headphone Amplifier with locally adjustable volume. Their partner can read or sleep in silence.

This installation further enhances the hotel stay by allowing the TV audio to be heard clearly while getting ready for the day. The -TPA1A wall-mounted amplifier allows a guest to set the volume as high as needed, even with shower water running. Intelligibility of the TV audio is not dependent on the volume setting in the guest room. If the TV internal speakers are muted, TV audio is only heard in the bathroom. This is ideal if one guest sleeps in or reads a newspaper while the other guest is using the bathroom.
