

CONNECT A TURNTABLE TO EQUIPMENT WITH LINE INPUTS

Interface Your Turntable with Modern Consumer or Pro Equipment With No Phono Inputs

ST-PH1
Stereo Phono Preamp

Description:

After the introduction of digital audio sources such as the CD and MP3, many manufacturers of both consumer and professional audio equipment omitted traditional phono inputs in favor of additional line inputs. The ST-PH1 Stereo Phono Preamp provides a low-noise RIAA preamplified interface between a turntable and any analog balanced or unbalanced line-level inputs on a mixer, processor or amplifier.

Placing the ST-PH1 as close to the turntable as possible allows the wiring between the tone arm pickup and the preamp to be kept as short as possible for optimum low-noise system performance.
