Subject: Pole Mount Tray
Model: PM-1T

RDL® INTRODUCES NEW PROJECTOR POLE MOUNT TRAY

The PM-1T is designed to provide concealed mounting for power amplifiers and other modules on a projector pole. This horizontal mounting system grips a standard 1-1/2" I.D. pole common to most projector mounts. The integral bracket and hose clamp assembly allows mounting to poles smaller than 1-1/2" and to square or rectangular projector mounts. The tray normally mounts directly above the projector and its low profile allows the projector and tray to mount just below the ceiling. The tray is no larger than a small projector, allowing the installed tray to be inconspicuous when viewed from below. Excess wire can be concealed in the tray.

Each PM-1T tray accommodates one FP-PA20 type Audio Power Amplifier (8 Ohm, 70 Volt or 25 Volt), its associated power supply and a variety of other modules. For stereo installations, one tray accommodates two FP-PA20 amplifiers or two PS-24U2 Power Supplies. There is adequate space remaining for associated STICK-ON and TX series modules. If two FP-PA20 type amplifiers are not used, multiple STICK-ON, FLAT-PAK and TX series modules may be mounted. Examples of typical tray-mounted modules include STICK-ON series power amplifiers, headphone amplifiers, VCA modules, line amplifiers, video amplifiers and distribution amplifiers.

The PM-1T is perfect for mounting amplifiers, supplies, other modules and wiring in close proximity to the projector.
