Subject: Compact line level pro mixer

### **RDL® INTRODUCES NEW, COMPACT LINE LEVEL PRO MIXER**

The RU-MX4L is an extremely flexible mixer in the very compact RDL RACK-UP® one-third rack space chassis. The mixer features four line level inputs accepting either balanced (XLR) or unbalanced (phono jack) sources. A direct input is also provided for cascading RU-MX4 style mixers. Each of the four input channel has its own dual-LED VU meter above the associated front panel level control. The output stage has one balanced output that may be set to microphone or line level, plus an unbalanced phono jack line output. Mixing capability can be expanded by connecting the unbalanced output of one RU-MX4L to the direct input of another RU-MX4 or RU-MX4L. Twelve inputs are possible with three mixers mounted in a single rack space using an RDL RU-RA3 rack adapter. An LED arc VU/peak meter monitors the final mix. An optional rear panel security cover (RDL RU-MX4SC) protects the rear panel settings when the mixer is used in portable applications.

The RU-MX4L is ideal in any application where mixing 4 line level sources is desired. It is also ideal as an economical expansion mixer for the RDL RU-MX4 Mic/Line mixer with integral compressor/limiter. If four wired mics are mixed through an RU-MX4, four wireless microphones can be added using the RU-MX4L. The line level outputs of the wireless receivers can be mixed using the RU-MX4L which can be bussed to the final mix in the RU-MX4.

The RU-MX4LT shares all of the features of the RU-MX4L and has a transformer balanced output.
