Subject: RDL RLC10KS Remote Level Control

## **RDL Introduces Stainless Version of Popular RLC10K Remote Level Control**

The popular RLC10K remote level control is now available in stainless steel to match the stainless versions of RDL wall controls, twisted pair products and Decora-style® wall plates and remote controls.

The RLC10KS is the ideal companion to the RDL VCA modules where levels are to be controlled from a single remote location. It is designed to directly interface with the 3-wire control input of the VCA module. The RLC10KS contains a high-quality 10 kΩ potentiometer for setting the control voltage.

The RLC10KS panel has 10 graphic increments which provide a visual indication of the level setting. The RLC10KS and RDL remote source selector may be mounted together in a double box/plate to form a visually appealing control of both audio source and audio level.

Three conductors are required for connection between the RLC10KS and an RDL VCA. A single shielded pair is normally used.

All the RLC10KS features combine to make it the optimum economical choice for single-point remote level control in high-quality systems. Use the RLC10KS individually with an RDL control module, or combine it side-by-side with other RDL remote accessories as part of a complete audio/video system.
