

MULTI-POINT ROTARY ENCODER LEVEL CONTROL

Multiple Control Points for Room or Zone Audio Level with Supervisor Mute Control

Description:

In this office sound system, the audio level in the employee work area may be adjusted from two different locations in the area and by the supervisor. Two D-RLC10 wall-mounted Remote Level Controls provide rotary volume adjustment and visual indication of the level adjustment in the work area. The supervisor's D-RLC10M Remote Level Control with Muting is further equipped with a front-panel mute button which cannot be overridden by the work area controls. When active, the D-RLC10M MUTE function shuts off the audio signal. When MUTE is toggled off, audio is restored to the previously set level. The single D-RLC10M and two D-RLC10s are shown controlling an RDL ST-VCA3, or they may be used with any RDL VCA or OEM product requiring a 0 to 10 Vdc Ramp to control level.
